VITERIE INOX DAL 1968

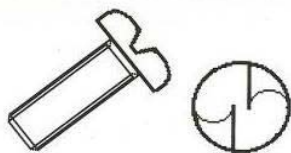

Solar Division

The search for use of alternative energies has become very common recently. This has brought to the development and to a more and more wide application of solar panels. Our company too has invested energies and resources in this field by producing the so called ONE WAY security screws, supported by the close examination of specialists in this sector. The particularity of the ONE WAY is that this screw can't be unscrewed with any tool and this gives the warranty requested by the insurance companies.

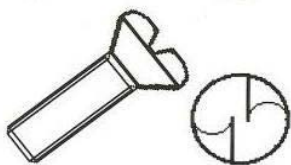

The ONE WAY screws are realized in stainless steel, as all our products. This material lends them the aesthetic and quality feature, which increases the value of your product.

To give you more information about these screws we attach drawings and tables related to productions which have been already done and installed by our customers all over Europe.

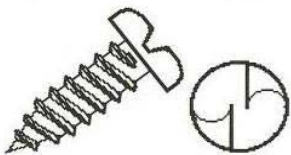

To conclude we also remind you that we can produce also special screws according to drawings, in order to meet the customer's specific requirements.
